**Discussion:**

This item is an update on the Bay Area UASI's resource inventory project. In 2010, CalOES requested that the Bay Area UASI continue to support the development of a resource management software system called "Incident Reporter". This system was developed by G4 Global Tech, Inc. and was later named "California Metrics" as part of a statewide project. Over the years, state support waned and California Metrics was left undone. The Bay Area UASI eventually took ownership of the application and renamed it the "UASI Resource Inventory Application". This system is not actively in use today and has not been updated since 2012.

Starting in November, 2014, the UASI management team began a needs assessment for a regional resource management system. As part of this assessment, the management team conducted interviews with state, regional, and local subject matter experts. A survey was also sent to each of the jurisdictions in order to gain insight on existing systems and feedback on ideal systems. This presentation is a report on the results of this assessment.

Presentation highlights include:

- Purpose of assessment
- Overview of process
- Results of survey
- System options
- Recommendation
