

Topic: Landauer RadWatch for responder radiological preparedness:

Please allow me to thank you for your time on November 21 when I introduced the RadWatch tactical dosimeter as new responder technology for radiation dose management. Please see this YouTube link for a five minute on line product demonstration. <http://youtu.be/ETsvfary6m0>

While the RadWatch does not replace a PRD for radiation warning alerts, it is the only tool available that will monitor your responders for cumulative total dose during an event and provide an accredited dose of record report.

At present, the RadWatch is being utilized by the US Army, FEMA and the National Guard. Responder agencies in New York City, San Diego, Los Angeles, Texas, New Jersey, Pennsylvania, Boston and Chicago have all committed to launching a program in either 2014 or 2015.

If you feel the RadWatch would be advantageous for your front line responders, it would be my pleasure to sit down with you and your agencies to go over the product line in depth and show you all of its capabilities.

Thank you very much for your time.
